## Acknowledgements

We thank the California health care providers including the clinicians, infection control practitioners, hospital administrators, and laboratorians who reported the cases to their local health departments.

We thank the local public health workers including the local health officers, communicable disease controllers, epidemiologists, health data managers, public health nurses, morbidity clerks and support staff for providing these data to the California Department of Public Health (CDPH) and for their daily contributions to communicable disease surveillance, investigation, and control.

We thank the CDPH Infectious Diseases Branch (IDB) subject matter experts for their review of reported cases and especially the IDB Surveillance and Statistics Section staff for their daily data entry, cleaning, and processing, all contributing to these CDPH IDB Yearly Summaries of Selected Communicable Diseases in California.

## CDPH INFECTIOUS DISEASES BRANCH (IDB) YEARLY SUMMARIES OF SELECTED COMMUNICABLE DISEASES IN CALIFORNIA, 2012 – 2020: Technical Notes

---

### Background

The California Department of Public Health (CDPH) Infectious Diseases Branch (IDB) maintains a system for the passive reporting of selected communicable disease cases and outbreaks mandated by state law and regulation.<sup>1</sup> Health care providers and laboratories are required to report known or suspected cases of these communicable diseases to their Local Health Department (LHD). LHDs in turn report these cases to CDPH.

These Technical Notes describe the definitions and methods used to analyze cases of selected communicable diseases reported to CDPH IDB,<sup>2</sup> as well as limitations to these analyses.

The collection and distribution of information on the health of the community is a core function and essential service of public health. The data in these yearly summaries provide important information on the magnitude and burden of selected communicable diseases in California. These surveillance data can contribute to the identification of risk groups to whom intervention strategies and actions can be targeted, and aid in assessing the effectiveness of these control and prevention measures.

### Materials and methods

#### *Case data source*

Included in this document--CDPH Infectious Diseases Branch (IDB) Yearly Summaries of Selected Communicable Diseases in California, 2012-2020--are incident cases of communicable diseases that had an estimated illness onset date from January 1, 2012 through December 31, 2020. These data were extracted from California Confidential Morbidity Reports that were submitted to CDPH by September 20, 2021 and entered into the CDPH California Reportable Disease Information Exchange (CalREDIE) system or reported electronically by CalREDIE non-participating LHDs.

Data were quality checked and duplicate case records were removed based on a probabilistic data matching de-duplication algorithm. For diseases that may occur as acute and chronic conditions--such as coccidioidomycosis and brucellosis--only the first report of the condition in a given patient was included based on an evaluation by the de-duplication algorithm of historical as well as recent surveillance data.

#### *Case inclusion criteria*

LHDs--and for some diseases also CDPH--reviewed case information to determine whether surveillance case definitions were met.<sup>3</sup> Cases were classified as Confirmed, Probable, or Suspect according to established clinical and laboratory criteria. Upon completion of case review, LHDs and/or CDPH designated cases as closed.

Reported cases of the following diseases that met criteria for a Confirmed case were included in this report: cholera, ciguatera fish poisoning (through 2018), coccidioidomycosis, domoic acid poisoning (through 2018), hantavirus infection, legionellosis, leprosy (Hansen's disease), listeriosis (through 2018), plague (human), and rabies (animal and human).

Reported cases of the following diseases that met criteria for a Confirmed or Probable case were included in this report: anaplasmosis, anthrax, babesiosis, botulism (foodborne, wound, and other), brucellosis, campylobacteriosis, chikungunya virus infection, ciguatera fish poisoning (as of 2019), Creutzfeldt-Jakob disease and other transmissible spongiform encephalopathies, cryptosporidiosis,

cyclosporiasis, cysticercosis/taeniasis, dengue, domoic acid poisoning (as of 2019), ehrlichiosis, flavivirus infection of undetermined species, giardiasis, hemolytic uremic syndrome (HUS) without evidence of Shiga toxin-producing *E. coli*, hepatitis E (acute infection), leptospirosis, listeriosis (as of 2019), Lyme disease, malaria, paralytic shellfish poisoning, paratyphoid fever, psittacosis, Q fever, relapsing fever, salmonellosis, scombroid fish poisoning, Shiga toxin-producing *E. coli* (STEC) (with and without HUS), shigellosis (Groups A, B, C, D, and Unspecified), spotted fever rickettsiosis, trichinosis, tularemia, typhoid fever, typhus fever, *Vibrio* infection (non-cholera), yellow fever, yersiniosis, and Zika virus infection.

For reported cases of the following diseases, only those closed by CDPH were included in this report: anthrax, botulism (foodborne, wound, and other), brucellosis, chikungunya virus infection, cholera, cysticercosis/taeniasis, dengue, flavivirus infection of undetermined species, hantavirus infection, legionellosis, leptospirosis, listeriosis, Lyme disease, malaria, plague (human), psittacosis, Q fever, rabies (animal and human), relapsing fever, spotted fever rickettsiosis, trichinosis, tularemia, typhus fever, *Vibrio* infection, and yellow fever.

For reported cases of the following diseases, only those closed by CDPH or noted by LHDs as “pending release/clearance” were included in this report: hemolytic uremic syndrome (HUS) without evidence of Shiga toxin-producing *E. coli*, paratyphoid fever, Shiga toxin-producing *E. coli* (STEC) with HUS, and typhoid fever.

For reported cases of Zika virus infection, only those closed by CDPH or noted by LHDs as “Closed to Surveillance - Open to Tracking” were included in this report.

For reported cases of the following diseases, only those closed by LHDs (or CDPH) were included in this report: amebiasis, anaplasmosis, babesiosis, campylobacteriosis, ciguatera fish poisoning, coccidioidomycosis, Creutzfeldt-Jakob disease and other transmissible spongiform encephalopathies, cryptosporidiosis, cyclosporiasis, domoic acid poisoning, ehrlichiosis, hepatitis E (acute infection), leprosy (Hansen's disease), paralytic shellfish poisoning, scombroid fish poisoning, and yersiniosis.

For reported cases of the following diseases, only those closed by LHDs (or CDPH) or noted by LHDs as “pending release/clearance” were included in this report: giardiasis, salmonellosis, Shiga toxin-producing *E. coli* (STEC) without HUS, and shigellosis.

For LHDs with surveillance systems that did not indicate cases' resolution status (Confirmed, Probable, Suspect) or whether cases were closed, all reported cases were included.

### *Population data source*

For the 2012–2020 Summaries, we used State of California, Department of Finance (DOF) postcensal population projections and estimates.<sup>4, 5</sup>

### *Definitions*

In general, we defined a case as a person with laboratory and/or clinical evidence of infection or disease that satisfied the most recent communicable disease surveillance case definition published by the United States Centers for Disease Control and Prevention (CDC) or by the Council of State and Territorial Epidemiologists.

Estimated date of illness onset was defined as the date closest to the time when symptoms first appeared. For cases for which an illness onset date was not explicitly reported, estimated date of illness onset was selected as the earliest of: date of diagnosis, date the case was reported to or received by CDPH, date of laboratory specimen collection, or date of patient death.

Cases were classified to local health jurisdiction according to the case-patient's county of residence. This classification may not correspond to the county where the case-patient was exposed, sought medical care, or was diagnosed.

Sex categories were defined as Female (including male to female transgender), Male (including female to male transgender), and Unknown.

Mutually exclusive race/ethnicity categories were defined as follows: Hispanic/Latino (of any, including unknown, race), and non-Hispanic White, Black, Asian/Pacific Islander, American Indian/Alaska Native, Multiple Race, and Other. Cases for which race and ethnicity were not reported were categorized as Unknown.

### *Data analyses*

We reported case totals and incidence rates (IR) stratified by estimated year of illness onset, age group, and local health jurisdiction.

- Incidence rate (IR) = Number of cases per 100,000 population per year
- Standard error (SE) =  $IR/\sqrt{\text{number of cases}}$
- Relative standard error =  $SE/IR \times 100$

We defined an IR as unstable if the relative standard error was 23 percent or more of the IR estimate (a threshold recommended by the National Center for Health Statistics).<sup>6</sup>

### **Tables and figures**

The following tables and figures are included in this report; please note that the tables and figures may be altered or suppressed to minimize depiction of unreliable IRs:

#### *Tables:*

- *Cases and IRs by health jurisdiction*
- *Cases by month of estimated illness onset*
- *Cases and IRs by age group*
- *Cases by race/ethnicity*

#### *Figures:*

- *Cases and IRs by year of estimated illness onset*
- *IRs by age group and year of estimated illness onset*
- *Cases and population by race/ethnicity*

### **Limitations**

#### *Completeness and timeliness of reporting*

The numbers of cases reported for some diseases may underestimate the true magnitude of disease. Among factors that can contribute to under-reporting are: delays in notification, limited collection or appropriate testing of specimens, obstacles or impediments to ill persons seeking health care, limited resources and competing priorities in LHDs, and inexhaustive reporting by clinicians and laboratories.

The lower numbers of cases in 2020 compared to 2019 for many diseases described in this report may reflect the impact of the Coronavirus Disease 2019 (COVID-19) pandemic, which in the U.S. began in 2020. For instance, the pandemic may have led to decreased transmission due to the

adoption of social distancing and mask-wearing prevention measures, as well as decreased reporting due to lack of care seeking and diagnosis.

Among factors that can enhance efficiency of disease reporting are disease severity, infrequent or rare occurrence of the condition, the availability of new or less expensive diagnostic tests, expansion of criteria that define a case, recent media attention or public interest, and active surveillance activities.

During the nine-year surveillance period (2012–2020), CDC and CDPH IDB conducted active surveillance for selected diseases in Alameda, Contra Costa, and San Francisco counties through the California Emerging Infections Program (CEIP). CEIP conducted active laboratory-based surveillance of campylobacteriosis, cryptosporidiosis, cyclosporiasis, listeriosis, salmonellosis, Shiga toxin-producing *E. coli* (STEC), shigellosis, *Vibrio* infection, yersiniosis, and pediatric hemolytic uremic syndrome.

Because race/ethnicity information was missing or incomplete for 29 percent of all 2012-2020 cases included in this report, IRs by race/ethnicity were not calculated. However, the proportion of cases representing race/ethnicity categories for selected diseases are presented alongside statewide averages for these categories during the nine-year surveillance period. Nonetheless, race/ethnicity information based on a high percentage of missing data should be interpreted with caution.

Data presented in this report may differ from previously published data due to delays inherent to case reporting, laboratory reporting, and epidemiologic investigation.

#### *Small numbers and rate variability*

All IRs are subject to random variation. Random variation may be substantial when the number of cases is small (e.g., less than 20) and can obscure distinguishing random statistical fluctuations from true changes in the incidence of disease. Rates and proportions based on small numbers of cases should be interpreted with caution.

#### *Rate comparisons*

Incidence rate comparisons between local health jurisdictions and surveillance years should be made with caution.

### **Accessibility**

An [accessible Excel data file](#) is available for this report. Accessible data for all selected diseases are grouped into the following tables:

- *Cases and Rates in California by Year of Estimated Illness Onset, 2012-2020*
- *Cases and Rates by Local Health Jurisdiction and Year of Estimated Illness Onset, California, 2012-2020*
- *Cases by Month of Estimated Illness Onset, California, 2012-2020*
- *Cases and Rates by Sex, California, 2012-2020*
- *Cases and Rates by Age Group and Year of Estimated Illness Onset, California, 2012-2020*
- *Cases by Race/Ethnicity and Year of Estimated Illness Onset, California, 2012-2020*
- *Average Incidence Rates by Age Group, California, 2012-2020*
- *Case and Population Percent by Race/Ethnicity, California, 2012-2020*
- *Case Number and Percent with 'Other' or Unknown Race/Ethnicity, California, 2012-2020*

UNKNOWN	35	26	47	64	54	68	56	68	41	

For inclusion/exclusion criteria, please refer to the Technical Notes.

### Legionellosis Cases and Incidence Rates by Year of Estimated Illness Onset, California, 2012-2020

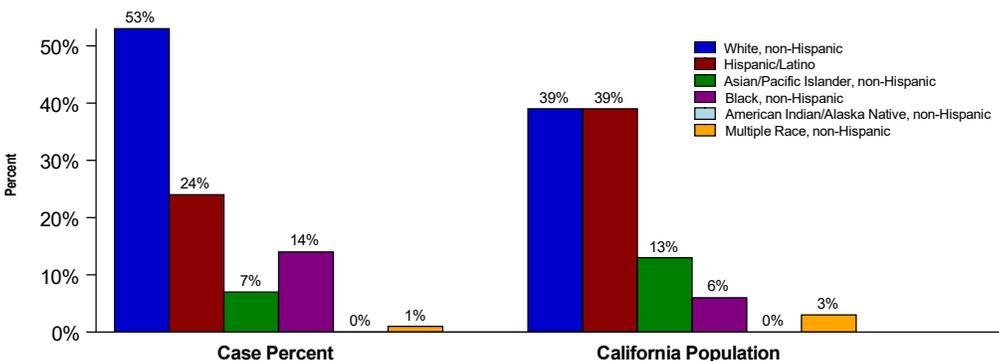

### Legionellosis Average Incidence Rates by Age Group, California, 2012-2020

\*Potentially unreliable rate: relative standard error 23 percent or more.

### Legionellosis Cases and Population by Race/Ethnicity, California, 2012-2020

12.1% (n=459) of reported incidents of Legionellosis did not identify race/ethnicity and 2.3% (n=88) of reported incidents identified as 'Other' race/ethnicity and are not included in the Case Percent calculation. Information presented with a large percentage of missing data should be interpreted with caution.

Rates are expressed as cases per 100,000 jurisdiction population per year.

For inclusion/exclusion criteria, please refer to the Technical Notes.

\*Potentially unreliable rate: relative standard error 23 percent or more.

Note: Includes reported cases of neonatal and non-neonatal listeriosis.

UNKNOWN	10	17	10	15	8	10	5	4	8	

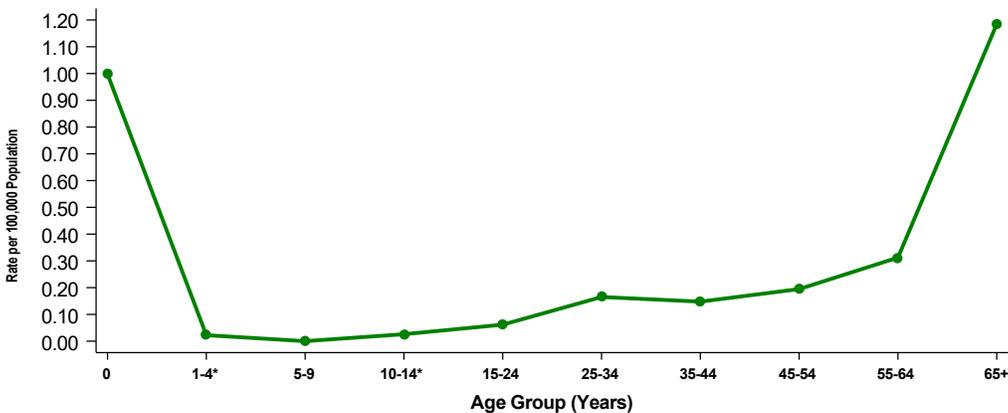

For inclusion/exclusion criteria, please refer to the Technical Notes.

Note: Includes reported cases of neonatal and non-neonatal listeriosis.

### Listeriosis Cases and Incidence Rates by Year of Estimated Illness Onset, California, 2012-2020

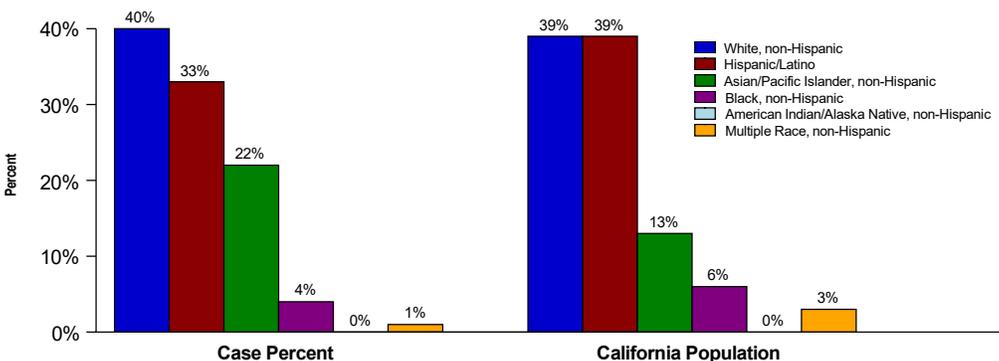

### Listeriosis Average Incidence Rates by Age Group, California, 2012-2020

\*Potentially unreliable rate: relative standard error 23 percent or more.

### Listeriosis Cases and Population by Race/Ethnicity, California, 2012-2020

8.4% (n=87) of reported incidents of Listeriosis did not identify race/ethnicity and 2.9% (n=30) of reported incidents identified as 'Other' race/ethnicity and are not included in the Case Percent calculation. Information presented with a large percentage of missing data should be interpreted with caution.

### Malaria Cases and Incidence Rates by Year of Estimated Illness Onset, California, 2012-2020

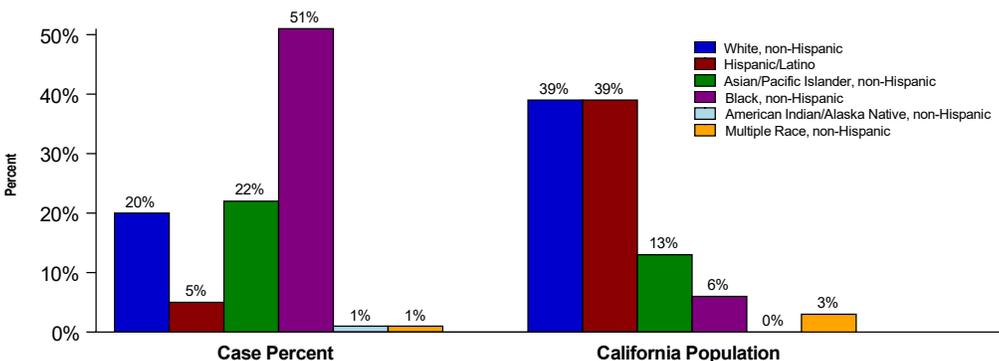

### Malaria Average Incidence Rates by Age Group, California, 2012-2020

\*Potentially unreliable rate: relative standard error 23 percent or more.

### Malaria Cases and Population by Race/Ethnicity, California, 2012-2020

12.8% (n=117) of reported incidents of Malaria did not identify race/ethnicity and 7.4% (n=68) of reported incidents identified as 'Other' race/ethnicity and are not included in the Case Percent calculation. Information presented with a large percentage of missing data should be interpreted with caution.

### Scombroid Fish Poisoning Cases and Incidence Rates by Year of Estimated Illness Onset, California, 2012-2020

\*Potentially unreliable rate: relative standard error 23 percent or more.

### Scombroid Fish Poisoning Cases and Population by Race/Ethnicity, California, 2012-2020

30.4% (n=62) of reported incidents of Scombroid Fish Poisoning did not identify race/ethnicity and 1.5% (n=3) of incidents identified as 'Other' race/ethnicity and are not included in the Case Percent calculation. Information presented with a large percentage of missing data should be interpreted with caution.
